

US Foods Inventory

- Why Inventory?

72% of operators state that food cost is their most pressing challenge*.

Taking food inventory counts regularly and comparing their value to the respective food sales is the only surefire way to determine, and monitor, food costs.

US Foods provides customers with an All-In-One ecommerce solution to help manage their inventory and food cost.

*(Datassential's Table Stakes Report – February 2024, Slide 4)

US Foods Inventory

- Before You Start

If it's your **First Time** taking an inventory, we suggest you reach out to a local Restaurant Operations Consultant for support in preparation. They can discuss setting goals, organizing your shelves, FIFO storage method, and more.

Next, you'll want to organize your Inventory Worksheet in Shelf to Sheet order. If you've done this already with your Shopping List, you're all set.

If not, go to My Lists, select the list you'd to use for taking Inventory, and make edits to your list. For more info on how to do this, you can use the [MOXē Companion Guide](#). **Note – Non-US Food Products can be added from the Inventory tool only and are not directly connected to specific Shopping Lists.*

If you're a **Returning User**, welcome back! We suggest using our Copy Past Inventory option to create your next Inventory. From there, switch to Edit Mode to remove any items no longer needed, add new items or adjust any pricing or units you use for counting as needed.

If you're using our GL Codes that appear on your US Foods invoices, we suggest you verify your GL codes and products are up to date.
